If you want to finally give Lightroom 4 a spin -- and yes, I do recommend Lightroom initially for the very fact that Photoshop users tend to over-buy -- you have until July 6 to check it out free-of-charge of Adobe. Trying that out could be a great backup plan if you run into a problem with the new version. In fact, you can keep Lightroom 5 installed too if you like, keeping your catalog right where you left it. Once you're set up with the two (2) apps it's an easy decision. You won't be sorry. About that pen: it works well with Photoshop Touch. It was, however, less accurate than the one attached to my Air 2. Adobe has smoothed out the pressure sensitivity and the strength of the pressure required to produce a stroke. All of that makes a big difference. The more ragged it is -- the more information is lost when it is flattened out -- the better the fabric stitches look in Photoshop. This is because Photoshop doesn't have the same capability to let you selectively change the color in an image as you can do in Corel Painter. Hence, the more information you've lost, the harder it is to create a colored piece of stitching. I'm not sure how much effort they made on the face; it looked plenty good enough for a start. The fabric stitches look a lot more realistic and believable than those that Photoshop Studios attempted using my iPad. It's impressive that Photoshop Studio was able to match the intensity of the original image. Something of this quality appeared to be immune to the effects of bleed color. Bleed appearance is determined by the number of colors in the fabric. The fact that at least one printer is starting to make special offers on fabric with some three- or more-color motifs yet that bleed appears to be mostly eliminated from the produced fabric, is a major achievement. For that, we tip our caps to Adobe.

In the days of Artifex, the web was a different place, and the only way to view and work with these files was in a download to your desktop. Now, thanks to what Adobe calls the Adobe Creative Cloud, designers can access these powerful tools from anywhere, using a desktop or a tablet. The flexibility of the Creative Cloud lets you access multiple accounts with your desktop applications while working in your browser. Because you still work with the traditional Photoshop, you can still zoom into an image, crop it, apply filters, and work with adjustments like the Crop Tool and Gradient Tool. **What It Does:** The Background Eraser is brand new function that takes away anything from the image behind the spot. It can be used to get rid of a background, add a pure color or make any other type of edits. Depending on your skills and your speed, this might be the most efficient method for you to work. While you can't use the Interface or View buttons, all of the other tools on the web Photoshop can work with web browsers to help do your work faster and more easily. While there are no audio options, you can also start editing a photo and then save the changes to the desktop application later. Like Photoshop, you can save your work and come back later. While in the web application, you can also add effects to the image. You can also add filters and layers, just like in the desktop application. Our Photoshop Camera app is unlike any other camera app on the market today. It's not just adding filters or effects to your photos. 1. Your first instinct to make pictures is to see a white wall. Often times a black & white photo looks much more better on white than on black. Try using black and white exposures.
2. It's easy to flip to the fastest mode on your camera. That is usually exposure mode (and may be the only mode you use), but it is not always the case. Should you want to on-the-fly change your exposure mode, you can use the single manual exposure in any mode. (Of course bring the camera with you.)
4. Look for transitions where it is hard to see your subject. Look for what you want to show. For example, a table top that gets too dark is interesting to look at. A dark wall next to a bright wall is interesting and the other way around is not.
5. Look for frames in your subject. These are frames of time, and it makes a picture more interesting. Simple say something like, "Friends at play." Now, if you notice your subject is in a

frame that looks odd, you can use it to your benefit. For example, if your subject is eating and you use a frame of a bite. It is interesting and will make your picture more interesting.
