Installing Adobe Photoshop and then cracking it is easy and simple. The first step is to download and install the Adobe Photoshop software on your computer. Then, you need to locate the installation.exe file and run it. Once the installation is complete, you need to locate the patch file and copy it to your computer. The patch file is usually available online, and it is used to unlock the full version of the software. Once the patch file is copied, you need to run it and then follow the instructions on the screen. Once the patching process is complete, you will have a fully functional version of Adobe Photoshop on your computer. To make sure that the software is running properly, you should check the version number to ensure that the crack was successful. And that's it - you have now successfully installed and cracked Adobe Photoshop!

After a long wait, and well thought out period of beta testing, we are now getting closer to the release of Adobe Lightroom 5.0, which includes powerful new features and fixes. Aside from the fact that it has been over a year since the previous release, the biggest change is the addition of a new "smart preview" feature that does the same thing as the "smart preview" in Lightroom 4.0.; the only difference is that the "smart preview" in the newer version is more uniform in how it renders the raw files. Performance is still great but if memory is not a problem, then the new version should have to capability of handling nearly 600 raw files without slowing down. There are also new features for Adobes new "RAW" development platform (DCS). While not entirely new, in the new release Adobe claims they have made significant improvements. On the UI side, there are new features that allow you to crop and correct your images more easily. Now when you use the "Correct Exposure" tool, you can choose from three presets, "Flash", "Horizon", or "Correct Black and White". They have also added basic lens corrections that reduce chromatic aberrations and vignetting. Adobe has also improved the Digital Negative (DNG) workflow. You can even select a small 4x4 version of a DNG file as your background image to create a quick JPEG. The UI has also been improved. Previously, you had to click on the "develop tools" tab within the "file" menu to access the develop tools, but in the new release, they have placed those tools in a new "Photoshop" tab. This allows you to open and work with your images in Photoshop as well as develop them. It also makes the "Photoshop tools" tab easier to access as well. In the web albums, you can now add your images to individual web pages, and the album layouts have been redesigned. You can even use CSS3 to customize the look of the album layouts. One of the most exciting new features for me is the ability to use Vimeo and Youtube video embeds within albums. In the "video" tab of the album properties, you will now see a place for text, pictures or video. You can even upload your own video. The ability to embed video in albums was something I was surprised actually was not added in the previous release. More importantly, the web viewers that list the thumbnails now have improved options as well. You can now simply swipe left or right to see the thumbnails. You can also pick which image appears in the thumbnail group based on a criteria (top right thumbnail, bottom right thumbnail, etc.) You can also (in Lightroom 4) change where the web browser loads the thumbnails.
